

# MAXIMIZE PROFITS by Autofeeding...

OTTO vs Hand Feeding Comparison

## Neptune OTTO Autofeeder

Neptune Dynamics developed an automatic feeder to fit both the Neptune HD1S sex sorting machines and the Neptune RHO popping machines. (Both machines use the same infeed belt.)

The 1999 season has proved conclusively that the Neptune OTTO Autofeeder works in production.

All of the Neptune OTTO Machines ran the complete season with almost no down time and the past season's results summarize that a Neptune OTTO/RHO combination processes, with two operators, the same amount of fish as a standard Neptune RHO with four operators, even though the machine speeds continue to climb.

In summary, we said the Neptune OTTO98 machine would operate with a Neptune RHO at a throughput of 250 actual fish per minute with two operators and the reality is it will do 300+ fish per minute. A throughput of 280 actual fish per minute is readily achievable.
